

Green Energy Innovations Inc.
5913 E. Washington Blvd.
Commerce, CA 90040

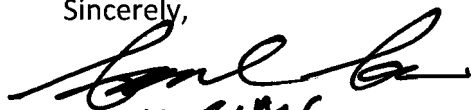

I would like to thank everyone at Green Energy Innovations for the stellar job they did in upgrading the lighting for our service station located at 1990 E. Del Amo Blvd

At first we were worried that upgrading the canopy lighting would disrupt business but were pleased to find that there was very minimal to no disruption to our customers. The installation was done quickly and efficiently. We thank you sincerely for your efforts as this was one of our main criteria for proceeding with the project. As quoted, the installation was completed in three days and your staff was very fast, polite, and professional.

Based upon our opinion and the feedback from our tenants, the new induction lighting system is a distinct improvement over the previous metal halide system. The difference is very apparent when comparing to the competing service stations across the street. The lighting quality at our station is more uniform and welcoming, which resulted in night-time revenues going up by more than 20% in the first month since we had them installed. Furthermore, our lighting utility costs have been reduced by approximately 65%.

I am completely satisfied with the project contracted with Green Energy Innovations and should you need to use me as a reference I would be happy to provide a glowing reference for your firm.

Sincerely,

Sam SIMS
